

A Comparison of Neuromorphic Classification Tasks

John J. M. Reynolds¹, James S. Plank¹, Catherine D. Schuman², Grant R. Bruer¹, Adam W. Disney¹, Mark E. Dean¹, Garrett S. Rose¹

Oak Ridge National Labs

07/24/2018

What's the premise?

Introduction
Overview
Models

Datasets for
Classification
Datasets Table
Examples

Results

Conclusions
and Future
Work

Conclusions

References

- Neural networks are reaching dizzying levels of success
- Researchers often compelled to try a "neuromorphic approach"
- How can the appropriate model be chosen?

Premise

- We compared different approaches from the viewpoint of a layperson, as it can often be unclear as to which model is most appropriate.

Figure 5: Depicted above is the reservoir computing paradigm outlined in our paper. In this work, the reservoir is spiking, thus following the liquid state machine theoretical framework.

Datasets Intro

Introduction

Overview
Models

Datasets for
Classification

Datasets Table
Examples

Results

Conclusions
and Future
Work

Conclusions

References

- Datasets with different characteristics were chosen
- Some are static classification
- Others are spatio-temporal

Takeaway

- The datasets were chosen to highlight different aspects of the models being compared.

Classification
Datasets Table
Examples

Results

Conclusions
and Future
Work

Conclusions

References

- We can draw some conclusions from the empirical data
- The models aren't optimized, so results could be improved

Results

Conclusions
and Future
Work

Conclusions

References

Accuracy

- No clear winner across all tasks in terms of **accuracy**

Size Weight and Power (SWaP)

- Spiking approaches seemingly produce orders of magnitude smaller networks.

Future Work

Introduction

Results

Conclusions
and Future
Work

Conclusions

References

Datasets

- Larger datasets
- More classes
- Control Applications

Timings

- Training and testing times need to be recorded and compared in both qualitative and quantitative manners.
